SUMMARY

Forecasting- and pipeline-focused Data Scientist with 3+ years of industry experience building reproducible, production-oriented data products that replace manual, spreadsheet-driven workflows. Currently completing a Master of Data Science at UBC. Experienced in forecasting/planning analytics, propensity scoring, recommendation-style ranking, and applied NLP/CV, with strong Python + SQL fundamentals and comfort partnering with business, science, and engineering stakeholders to translate model outputs into operational decisions.

TECHNICAL SKILLS

Languages: Python, R, SQL

Tech Stack: Docker, Git; AWS (S3), Azure, Alibaba Cloud (RDS-equivalent services); Apache Airflow, Spark; PostgreSQL, MySQL (PolarDB-compatible), MongoDB; Jupyter; Tableau, Power BI.

EXPERIENCE

Data Scientist (Capstone) — UBC Animal Welfare Program

Vancouver, Canada | Apr 2026 – Present

- Building MooVision, a multi-stage CV pipeline replacing manual video labelling of dairy calf cross-sucking behavior - progressing from a YOLOv8 proximity baseline through fine-tuned frame-level detection to temporal sequence classification, with evaluation prioritizing F2 score to reflect the asymmetric cost of missed detections.

Data Scientist II — JLL (Jones Lang LaSalle)

Guangzhou, China | Jul 2023 – Aug 2024

- Architected the end-to-end data pipeline powering city-level news recommendations on the Ruijian Shuju analytics platform; ingesting 9 Chinese real estate outlets via adversarial scraping techniques, automated daily via Apache Airflow on Alibaba Cloud with PolarDB for query serving, replacing a manual weekly research process with a fully automated, production-grade ETL workflow.
- Layered an NLP processing stage on top of the pipeline applying LLM summarization, NER-based location and monetary entity extraction, and cosine similarity deduplication to rank and surface relevant news by city to overseas firm users in real time.

Data Scientist — JLL (Jones Lang LaSalle)

Guangzhou, China | Jan 2023 – Jul 2023

- Designed a multi-signal propensity scoring pipeline fusing corporate signals (job postings, investment flows, policy changes, etc.) with scraped POI data to predict client upsizing/downsizing intent, surfacing prioritized leads via a context-aware action recommendation system; increasing broker cold-calling success rate by 30%.
- Led a GPT-3.5 hackathon on Azure, building a Flask web platform using Selenium-driven dynamic rendering and runtime LLM-generated code execution to extract structured data from arbitrary websites; enabling zero-code data collection for non-technical analysts and eliminating hours of manual research per week.
- Built a street-view imagery scraper with geo-coordinate extraction to map land plot visual context for the Shenzhen Industry Park white paper, delivering proprietary macro analysis of development pace and land usage ahead of public reporting.

Business Data Analyst — JLL (Jones Lang LaSalle)

Guangzhou, China | Sep 2021 – Jan 2023

- Co-authored the Vacancy Anxiety Index by engineering a quarter-aware vacancy tracking algorithm across 4 submarkets, 21 buildings, and 500+ units; combining per-unit destocking duration with an absorption rate model to produce a forward-looking leasing risk indicator, directly shaping institutional client advisory strategy.
- Built IQR-based pricing benchmarks integrating third-party market data to flag statistical outliers in landlord asking rents, translating anomaly detection outputs into premium positioning recommendations for the leasing advisory team.
- Automated legacy BI reporting workflows in Python + Tableau and built ad-hoc scraping pipelines for POI ingestion in new markets, eliminating manual errors and accelerating regional business development.

EDUCATION

Master of Data Science University of British Columbia

Aug 2025 – Jun 2026

Bayesian Statistics; Regression; Causal Inference; Spatial & Temporal Models; NLP & Sequence Modeling; Deep Learning & Computer Vision; Supervised & Unsupervised Learning

MicroMasters — Statistics & Data Science MITx

May 2023 – Jan 2025

Bachelor of Commerce — Business Technology Management Toronto Metropolitan University

Sep 2016 – Jun 2021
